The Leucine-responsive regulatory protein (Lrp) is thought to regulate the expression of multiple genes and operons in bacteria. Two strains $l rp^+$ and $l rp^-$ were studied to investigate which genes are subject to changes in expression levels.

The raw data were taken from CyberT website. The data for 8 chips ($4\ l rp^+\ and\ 4\ l rp^-$).
Format

An **AffyBatch** of 8 samples.
