The Leucine-responsive regulatory protein (Lrp) is thought to regulate the expression of multiple genes and operons in bacteria. Two strains \textit{lrp}+ and \textit{lrp}− were studied to investigate which genes are subject to changes in expression levels.

The raw data were taken from CyberT website. The data for 8 chips (4 \textit{lrp}+ and 4 \textit{lrp}−).

\textbf{Format}

An \texttt{AffyBatch} of 8 samples.
